Patent No. 6521795

GENERAL INFORMATION:
TITLE OF INVENTION: MUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABACUSTOSA FOR DIAGNOSTICS AND THERAPEUTICS
TILE OF INVENTION: ABACUSTOSA FOR DIAGNOSTICS AND THERAPEUTICS
TURBENT TILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PAPILOM NUMBER: US 60/094,190

PRIOR PELING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 22121

TYPE: PRT

                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Sequence 5, Application US/09568102

Patent No. 6346404

GENERAL INFORMATION:

APPLICANT: Schupp, Thomas

APPLICANT: Ligon, James

APPLICANT: Molnar, Istvan

APPLICANT: Zirkle, Ross

APPLICANT: Zirkle, Ross

APPLICANT: Zirkle, Ross

APPLICANT: Goerlach, Joern

TILL OF INVENTION: GENES FOR THE BIOSYNTHESIS OF EPOTHILONES

FILE REFERENCE: 4-30582A

CURRENT APPLICATION NUMBER: US/09/568,102

CURRENT APPLICATION NUMBER: 09/335,409

PRIOR FILING DATE: 1999-06-17

NUMBER OF SEQ ID NOS: 30

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 5

LENGTH: 7257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 5, Application US/09335409

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 33963, Application US/09270767

Patent No. 6703491

GRNERAL INFORMATION:
APPLICANT: Homburer et al.
TITLE OF INVENTION: Valeic acids and proteins of Drosophila melanogaster TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

complex (complex III or cytochrome b-cl complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

COFACTOR: Binds two heme groups non-covalently. Heme 1 (or BL or b562) is low-potential and absorbs at about 562 nm, and heme 2 (or BH or b566) is high-potential and absorbs at about 566 nm (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lincombin cleavage.";
Blood 89:3223-3262(1997).
-- FUNCTION: The GPIb-V-IX complex functions as the von Willebrand factor receptor and mediates von Willebrand factor-dependent platelet adhesion to blood vessels. The adhesion of platelets to injured vascular surfaces in the arterial direculation is a critical intitating event in hemostasis (By similarity).
-- SUBCELLULAR LOCATION: Type I membrane protein.
-- SIMILARITY: Contains 14 leucine-rich (ERR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@sib.cib.ch)
promotes their transfer between the different cellular sites. Binds with high affinity to alpha-tocopherol. Also binds with a weaker affinity to other tocopherols and to tocotrienols. May have a transcriptional activatory corpierols and to tocotrienols. May have a transcriptional activatory corporates and binds some squalene structure, suggesting that it may regulate cholesterol biosynthesis by increasing the transfer of squalene to a metabolic subsunt: Monomer (By similarity).

SUBCELULAR LOCATION: Cytoplasmic in absence of alpha-tocopherol, and nuclear in presence of alpha-tocopherol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Name=3;

                                                                                                                                                           structure, suggesting that it may regulate cholesterol
blosynthesis by increasing the transfer of squalene to a metabolic
active pool in the cell (By similarity).
-!- SUBUNIT: Monomer.
-!- SUBCELLULAR LOCATION: Cytoplasmic in absence of alpha-tocopherol, and nuclear in presence of alpha-tocopherol (By similarity).
-!- SIMILARITY: Contains 1 GOLD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                       44406 MW; FAE72E8A83CB9E9C CRC64;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 10
d90091
hypochetical protein orf670 [imported] - Guillardia theta nucleomorph
c;Species: nucleomorph Guillardia theta
A;Note: a nucleomorph is the vestigial nucleus of a eukaryotic endosymbiont
C;Date: 10-May-2001 #sequence_revision 10-May-2001 #text_change 09-Jul-2004
C;Accession: G90091
